

# TERMICURE 25EC

# TERMICURE 25EC

## APPLY THE ABOVE SOLUTION IN FOLLOWING WAYS:

### Pre-Construction:

- Spray, shower or flood the water mixed solution at 4-5 liters per sq meter (10.76 feet) on
- Foundation Pits
- Foundation when reaches at DPC /Plinth level (by making trench along the wall)
- Before construction of temporary (karchal) floor
- Between constructed area and outer plot boundary wall

### Precautions:

- Wear gloves while using **TERMICURE**.
- Keep the product away from eatables, animals and children.
- Avoid contact with eyes and skin.
- If swallowed, consult a physician immediately.

### Wood Treatment:

Mix 250ml of **TERMICURE 25 EC** in water or kerosene oil and apply (with brush) on raw wood or before making wooden articles.  
Apply twice on cutting edges.

### Post-Construction:

- Drill holes inside and outside the walls at 2-3 ft distance and 15-18 inches deep.
- Inject or pour solution @ 4-5 litres per hole in order to create a barrier inside and around the walls.
- All holes should be suitably plugged after treatment.

HELPING YOU  
PROTECT YOUR  
WOOD FROM  
TERMITES

- ▶ Non-Repellant
- ▶ Long Residual Control
- ▶ Effective At Low Dosage

# TERMICURE 25EC

## Specifications:

TERMICURE contains 25g of Fipronil per litre, with flash point of 80C  $C_9H_{11}ClN_2OS$   
 Family: Phenyl Pyrazoles

## Unique Mode Of Action:

Whenever Termites ingest or encounter TERMICURE, they become 'Carriers', transferring poison to every other termite they encounter. As a result, these termites become secondary carriers, transferring poison to every termite they come into contact and further on throughout the colony. Due to this unique mode of action, termites working even 15 meters away may get affected and finally it results in termite colony management.

## Direction for Use:

Make spray solution according to the following method

Termicure	Mix in	Area to be treated
25 EC	Lit. of Water	Sq. Meter Sq. Feet
1 Liter	250	50 540

## Why Choose Inferior Chemistry?

With the development in technology and research, pesticides have become more object oriented, that means new chemistry products like TERMICURE 25 EC work harder to control pest and yet cause no harm to the environment. Molecules in Termicure belong to EPA class III category i.e., slightly hazardous

**ADVANTAGES:**

- New chemistry & unique mode of action
- Non-Repellent
- Effective at low dosage
- Long residual control
- Low water solubility & low vapor pressure
- No Odor & very little irritation.

# TERMICURE 25EC

**1** Inspiring Growth Transforming Lives  
 JAFFER

## STEP 1

Foraging termites are not repelled, and willingly enter TERMICURE treated soil:

- Foraging termites pick up termicure in two ways:
- Through ingestion
  - Through contact with the soil

## STEP 2

Contaminated termites transfer the active ingredient to uncontaminated termites by contact, grooming and exchange of food

## STEP 3

The transfer of TERMICURE through other members of the termite, in the colony will cause large number of termites to die and thus creating the "COLONY MANAGEMENT" effect.
